Art Unit: 3689

DETAILED ACTION

1. This is in response to the applicant's communication filed on 01/12/2009, wherein

Claims 1-9, 11-12 are currently pending;

Claim 2 has been amended;

Claim 10 has been cancelled;

Claims 11-12 have been added.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-9, 11-12 are rejected under 35 U.S.C. 102(b) as being anticipated by LEYMANN ET AL (US Patent 6,009,405).

As for independent claim 1, LEYMANN ET AL disclose a method of generating a computer implemented business process, comprising:

passing a logical transaction context to an activity invoker (performer) to instantiate a business activity with the logical transaction context;

{see col. 7, lines 59-67 "... activity when invoking said activity, or by passing a transaction identifier to an activity when invoking said activity...."; col.17, lines 1-5;

Art Unit: 3689

discuses a transaction context is passed to an activity, col. 4, lines 20-30 "....activities which are performed...."; and

Page 3

executing at least one event associated with the business activity within the logical transaction context

{see figures 1-2 and 5, col. 9, lines 1-67, e.g. during the operating of a transaction, if something goes wrong or there is a failure during the transaction's execution, the transaction application can undo all the operations and the system can cause the transaction's to be rolled back; and col. 17, lines 15-25 and lines 60-67, col. 18, lines 1-14, discuses the work items performed within a set of activities are executed within a common transaction context};

As for the limitation of "an activity factory" in the first step, this is inherently included in the teachings of "activity invoker" or "activity performer" as indicated above since they all have the same function/meaning of "generating an activity".

Note: This appears to be a "data processing" method (see preamble limitation of "computer implemented business process", therefore, the term "*logical*" in the "logical transaction context" have been determined to be non-functional descriptive material (NFDM), thus having no patentable weight and does not need to be taught by the prior art. Nonfunctional descriptive material can not render nonobvious an invention that would have other wise been obvious. In re Gulack, 703 F. 2d 1381, 1385, 217 USPQ 401, 40-4 (Fed. Cir. 1983) (when descriptive material is not functionally related to the substrate, the descriptive material will not distinguish the invention from the prior art in terms of patentability. See MPEP 2106.01.

Note: As for the term "to instantiate a business activity", this is not a positively recited method step but, rather as intended use at the entity (activity factory).

As for dep. claim 2, LEYMANN ET AL discloses further comprising passing the logical transaction context to the activity factory to generate an additional business activity having the logical transaction context.

{see figure 5, col. 13, lines 30-62, col. 17, lines 15-25, col. 5, lines 55-60; col. 17, lines 60-67, col. 18, lines 1-14}

As for dep. claim 3, LEYMANN ET AL discloses wherein the first and second business activities form an activity chain {see figure 5; col. 17, lines 15-25 and lines 44-60; discloses set of activities}

As for dep. claim 4, LEYMANN ET AL discloses wherein the logical transaction context spans multiple transactions {see figure 5, col. 3, lines 21-22; col. 5, lines 55-60; discloses *multiple transaction work items, or chained transaction*};

As for dep. claim 5, LEYMANN ET AL discloses wherein executing the at least one event associated with the business activity occurs on a serer {see abstract; executes network of potentially distributed activities or events}

As for dep. claim 6, LEYMANN ET AL disclose wherein the business activity also takes an activity instance identifier {see col. 7, lines 59-67; transaction identifier to an activity}

As for dep. claim 7, LEYMANN ET AL disclose wherein the business activity is instantiated by an entity {see col. 12, lines 6-14; an activity represents a business action that is from a certain entity}

Application/Control Number: 10/623,208

Art Unit: 3689

As for dep. claims 8-9, which deal with the features of the business activity when instantiated, by a process, this is taught in col. 11, lines 60-67, "....instantiated ... process model....business process....". As for the type of process, a static or a dynamic process, this does not appear to be essential to the property of the business activity and is inherently included in the process of LEYMANN ET AL. Moreover, this is not a positive limitation and has little or no patentable weight in a method claim since how does the type of process affect the business activity differently?

Page 5

As for independent claim 11, LEYMANN ET AL disclose a method of generating a computer implemented business process, comprising:

passing a logical transaction context to an activity invoker (performer) to instantiate a business activity with the logical transaction context;

{see col. 7, lines 59-67 "... activity when invoking said activity, or by passing a transaction identifier to an activity when <u>invoking</u> said activity...."; col.17, lines 1-5; discuses a transaction context is passed to an activity, col. 4, lines 20-30 "....activities which are performed...."; and

instantiating a business activity or creating an instance of a class/object with the logical transaction context;

{see col. 11, lines 44-64;col. 13, lines 40-67, col. 15, lines 60-67, discloses a process model can be instantiated depending on the context of the instantiation of the model, can be determined such a model of a business process can be perceived as a template for a class}

Art Unit: 3689

executing at least one event associated with the business activity within the logical transaction context

{see figures 1-2 and 5, col. 9, lines 1-67, e.g. during the operating of a transaction, if something goes wrong or there is a failure during the transaction's execution, the transaction application can undo all the operations and the system can cause the transaction's to be rolled back; and col. 17, lines 15-25 and lines 60-67, col. 18, lines 1-14, discuses the work items performed within a set of activities are executed within a common transaction context};

As for the limitation of "an activity factory" in the first step, this is inherently included in the teachings of "activity <u>invoker</u>" or "activity <u>performer</u>" as indicated above since they all have the same function/meaning of "generating an activity".

Note: This appears to be a "data processing" method (see preamble limitation of "computer implemented business process", therefore, the term "*logical*" in the "logical transaction context" have been determined to be non-functional descriptive material (NFDM), thus having no patentable weight and does not need to be taught by the prior art. Nonfunctional descriptive material can not render nonobvious an invention that would have other wise been obvious. In re Gulack, 703 F. 2d 1381, 1385, 217 USPQ 401, 40-4 (Fed. Cir. 1983) (when descriptive material is not functionally related to the substrate, the descriptive material will not distinguish the invention from the prior art in terms of patentability. See MPEP 2106.01.

As for dep. claim 12, basically this claim has the same limitation as dep. claim 2 above. It is rejected for the same reason sets forth dep. claim 2 above.

Art Unit: 3689

Response to Arguments

4. Applicant's arguments filed on 01/12/09 have been fully considered but they are not persuasive.

As for the argument on page 5 of the remark, Applicant states that LEYMANN discloses the passing a logical transaction context to an activity but does not disclose the passing a logical transaction context to an activity factory. The Examiner respectfully disagrees. LEYMANN disclose "passing a logical transaction context to an activity invoker (performer) {see col. 7, lines 59-67 "... activity when invoking said activity, or by passing a transaction identifier to an activity when invoking said activity...."; col.17, lines 1-5; discuses a transaction context is passed to an activity, col. 4, lines 20-30 "....activities which are performed....". As for the term "activity factory", the claim language failed to provide specific structural and functional distinctions between the claimed invention of the reference. However, this feature is inherently included in the teachings of "activity invoker" or "activity performer" as indicated above since they all have the same function/meaning of "generating an activity".

As for the argument on page 5 of the remark, Applicant states that LEYMANN does not disclose passing the logical transaction context to the activity factory to generate an additional business activity. The Examiner respectfully disagrees.

LEYMANN discloses in figure 5 the set of activities or plurality activities which are connected via path or groups of activities within the process model, see col. 5, lines 55-67, col. 13, col. 17, lines 15-25, col. 5, lines 55-60; col. 17, lines 60-67, col. 18, lines

Art Unit: 3689

1-14 and col.17, lines 1-5; discuses a transaction context is passed to an activity, col. 4, lines 20-30 "....activities which are performed....".

As for the argument on page 6 of the remark, Applicant states that LEYMANN does not disclose "wherein the business activity is instantiated by a static process" as recited in dep. claim 8. The Examiner respectfully disagrees. As for claims 8-9 which deal with the features of the business activity when instantiated, by a process, this is taught in col. 11, lines 60-67, "....instantiated ... process model....business process....". As for the type of process, a static or a dynamic process, this does not appear to be essential to the property of the business activity and is inherently included in the process of LEYMANN ET AL. Moreover, this is not a positive limitation and has little or no patentable weight in a method claim since how does the type of process affect the business activity differently?

Art Unit: 3689

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
